APPLICATIONS OF TRANSLATION AND IMPLEMENTATION SCIENCE:

a special issue of the Journal of Community Psychology

Guest Editors: Stephen Schueller, University of California - Irvine &
Maya Boustani, Loma Linda University

Journal of Community Psychology is planning special issues that describe approaches to applications of translation and implementation science. Both areas are focused on the "process" of adaptation of interventions and treatments. Recently there has been a growing interest in translational research and implementation science. Translational research describes efforts to take interventions developed in one setting, culture, or in one language and moving it to a different setting, culture, or language, and often that translation requires modifications and adaptations. Implementation science is the study of methods to promote the adoption and integration of evidence-based practices, interventions and policies into routine health care and public health settings. These concepts are often used interchangeably and although there is overlap, there are also distinctions.

Authors should submit manuscript to ScholarOne, https://mc.manuscriptcentral.com/jcop, no later than April 30, 2019. The cover letter should indicate that the manuscript is for a special issue.
